## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for permitting offline playback of digital content files after local verification by the user's computing device of the license terms. Each of the independent claims identify the uniquely distinct features of enabling off-line playback of a content file by first verifying the terms of a license using a segment of the content file within the license and information fields within the header of the content file. After the license is verified, the system retrieves from the license the segment of the content file, a session key to decrypt the encrypted portion of the content file and combine the segment of the content file found within the license with the decrypted content file. The closest prior art, Auerbach (US 5,673,316), discloses a conventional system for controlling access to digital documents using cryptographic envelopes, fails to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
